Halls are 10-minutes away from big supermarkets and the train station. Even less is the walk to get to the city centre, full of restaurants, cafes and bars.

Speciality

International College Dundee

If you do not meet our academic grade requirements for your chosen course, we can offer you an alternative route to begin your studies. Our international incorporated degrees will develop your subject knowledge, academic English and university level study skills.

Pathways Available - International Stage One

Tuition fees for International students will increase by no more than 5% per year for the length of your course.

Additional information

Degree Overview

This course explores approaches to treatment with a focus on neuroscience, metabolic disease, and cancer – all research strengths at Dundee. This gives you an understanding of how scientists explore biomedical discoveries and develop them from initial innovation to real-world application.

You'll focus on topics like molecular pharmacology and quantitative pharmacology – how drugs behave depending on various factors.

Gaining an understanding of key theories, from the molecular level to full body systems and beyond, is important to understand the field as a whole.

Your first two years will cover concepts including genetics, cell division, biological organisation, molecular mechanisms, and processes.

You'll develop practical skills, including laboratory skills, data analysis, and how to design and run experiments. This will prepare you for carrying out projects later in your course.

You will pick modules that suits your interests and can transfer to a different life sciences degree if you choose the relevant modules.

Our course curriculum is shaped by the work of our world-leading researchers to make sure you're learning the latest advances, as well as gaining an understanding of the fundamentals of the field.

Lab sessions will bring together your knowledge and practical skills, as well as helping you develop strong transferable skills.
