- Performances and productions
- Special occasions and celebrations

Speciality

Placement fee: £1,850

Pathways Available

International Year Zero

Additional information

Degree Overview

Accredited by the British Psychological Society (BPS), this course gives you an understanding of the human mind and how it shapes and influences our behaviour. The programme explores human behaviour using sound scientific methodology – observation, measurement, and testing – to understand how and why people function in the way they do. As this course combines the study of psychology with health and wellbeing, you will also explore the social science perspectives in relation to health issues.

Gaining a professionally accredited psychology degree is an essential first step to a career as a psychologist or to progress to postgraduate study. Choosing this programme will help to equip you with key transferable skills including critical thinking and communication, as well as competencies closely linked with the sector, such as scientific research methods, data analysis and data presentation skills.

On our programme you'll study core areas of psychology including biological, cognitive, developmental and social psychology, as well as learn about personality and intelligence, research methods, and historical perspectives. Through the health and wellbeing aspect of this course, you'll also have the opportunity to explore health promotion and public health, ageing and health, social exclusion and health or the impact of gender on health and social care.

Our graduates have gone on to pursue a diverse range of careers where an understanding of societal issues is key – such as in criminal justice, education, social work, research, advertising, human resources and healthcare.

Study Reasons

Graduates from this course have gone on to work in a variety of roles across a range of well-respected sectors, including the police service, criminal justice, education, teaching, social work, human resources, healthcare, research, and advertising.

As part of the final year Employability Skills and Psychology module, you will complete a self-sourced work experience placement, building a bridge between academic theory and its practical application.

Through DMU Global, we offer an exciting mix of overseas, on-campus and online international experiences, including the opportunity to study or work abroad for up to a year.
