Pathways Available - International Stage One

Tuition fees for International students will increase by no more than 5% per year for the length of your course.

Additional information

Degree Overview

Our International Business degrees have a slight focus on economics, but very much with an international component. All International Business degrees are useful as general degrees, particularly give their analytical and quantitative content. We live in a world where business operations are becoming increasingly global in scale. National boundaries now matter very little to decisions about where goods are made, and services provided. In this course you will learn what this means for today's business world.

The course has economics at its core, covering micro and macroeconomics. However, it is much broader than a standalone economics degree. It analyses the major external factors affecting global business, globalisation and applied policy. It covers many exciting topics, including Managing Teams and Individuals in a Multicultural World, Big Data Analysis, Branding and Marketing, rethinking Leadership, Global Marketing Strategies, and much more. So, a huge range of relevant business areas covered.

Study Reasons

The internship option adds a strong "in-practice" element, as it gives students the chance to put their learning into-practice in an organisation.

The role of governments and other bodies in global business is hugely relevant especially with the regulation of the economy and businesses and the design of policy relating to business and the economy.

This course provides a deep understanding of international markets, trade, and cross-border operations, equipping you with the skills to navigate and succeed in the global economy.
