**24/7 security:** Security staff on site.

**24/7 residential support:** Residential support staff on-call for advice and welfare.

## Speciality

Pathway international year zero is available

## Additional information

## Degree Overview

This specialised degree provides a firm grasp of the science underpinning computer and software systems. In this programme modules you can study as part of this degree include Advanced Networks. Computer and Communication Systems and Enterprise Server Management. Throughout your studies you will gain practical experience of developing systems using the latest technologies and techniques, as well as exposure to the latest trends that will shape the future of computer science. Upon graduation, you will be equipped to work independently and to develop and adapt your skills throughout your future career.

## Study Reasons

- The University of Greenwich is an academic partner with The Council for Registered Ethical Security Testers (CREST).
- Through this degree will learn the principles, applications, and the scope of current and future networks and gain the skills to critically analyse and evaluate network systems.
- Career opportunities exist in many computing areas such as IT support, consultancy, internet and e-commerce applications. Graduates can expect to work as independent consultants or in teams with other computer professionals to build and support modern computing systems.
