- Filming & production locations
- Meetings, workshops & training rooms
- Performances and productions
- Special occasions and celebrations

Speciality

Placement fee: £1,850

Pathways Available

International Year Zero

Additional information

Degree Overview

The Health and Wellbeing in Society is an interprofessional and dynamic science course, providing an opportunity for students to understand and analyse contemporary developments in health and social care.

The course is structured to enable students to tailor their learning to fit specific career interests, build their confidence and acquire specialist skills sought by employers.

In this programme you'll study personal and academic development, the psychological and sociological theory of health and illness, health and welfare, health improvement and lifestyle, social research methods, health and disease in communities, and health promotion and public health. You'll also have the opportunity to choose from elective modules in year three including ageing and health, mental health and wellbeing, and social exclusion and health. In addition, your final year will give you the opportunity to apply the knowledge you have learned by producing a health intervention report, where you will make recommendations on how to improve access to healthcare for all.

Study Reasons

Graduates of this course have secured careers in social work, and health promotion with charitable organisations or local councils as well as progressing onto further study. The course is also an excellent foundation for postgraduate study, including the Masters by Research MA/MSc at DMU.

DMU is among the top 25 UK universities with the best employment rates, with almost 96% of its graduates in work or further study six months after graduating (well above the national average).
