- Exhibitions and fairs
- Filming & production locations
- Meetings, workshops & training rooms
- Performances and productions
- Special occasions and celebrations

Speciality

Placement fee: £1,850

Pathways Available

International Foundation Certificate | International Year Zero

Additional information

Degree Overview

This course covers the science and technology of audio and recording systems and how these can be used effectively in recording, mixing and mastering and sound design. You will develop skills in audio mixing and mastering, learn the principles of electronics and acoustics, study the measurement and design of recording and audio product environments, and produce sound for digital media, including radio, television, film, video games and online content.

Through core modules, you will learn about the fundamentals of audio engineering, discover the acoustical foundations of musical sounds and be introduced to studio techniques.

You will build a skillset that will equip you for roles in areas such as studio recording, audio and post-production, sound system installation, management and sound for film and TV. Our graduates have gone on to work in successful roles for major companies including Bauer Media and Spotify.

Study Reasons

Students learn a range of skills in on-location, live, AV and studio production, allowing you to pursue a career in music production, audio engineering, sound design, remixing and mastering, radio, TV or games.

Graduates are also well positioned to continue their academic careers by embarking on postgraduate study, in either research or taught areas, which offers the opportunity for further specialisation, including the Music Technology and Innovation MA course offered at DMU.

Our innovative international experience programme DMU Global aims to enrich your studies and expand your cultural horizons, helping you to become a global graduate, equipped to meet the needs of employers across the world.
