

Arizona State University (Tempe campus)

Biological Sciences (Conservation Biology and Ecology), BS

Study details

Course type: Bachelor's degree

Degree: Biological Sciences (Conservation Biology and Ecology), BS LABSCCBS

Study mode: Full time

Duration: 48 Month

Cost of study

Cost : 35 430 USD

Reg. fee : 85 USD

Scholarship :

Insurance : 2 765 USD

Intake/s

Jan/May/Aug

Requirements

Academic requirements

First-year students must:

- Have a 3.00 grade point average (GPA) (a "B" or better where "A"=4.00) from a secondary school. Some ASU programs may have higher admission or English proficiency requirements and may consider a minimum ACT or SAT score.
- Must have three years of high school coursework. (If you are currently in high school, ASU needs to see 9–11 grade coursework. If you have completed high school, ASU needs to see 10–12 grade coursework.)
- Must have and present a completed high school diploma or certificate.

Conditional admission

ASU may offer conditional undergraduate admission to international applicants to an on-campus program who meet the academic (aptitude) requirements but who are not proficient in English. This offer of conditional admission will give you time to improve your English proficiency before you start classes at ASU. Your conditional admission offer is good for up to three semesters, during which time you must meet one of these requirements to begin your ASU experience.

Competency requirements

International students who completed high school outside the U.S. are required to meet the following competency requirements:

- Math: four years (algebra I, geometry, algebra II and one course requiring algebra II as a prerequisite).
- Laboratory science: three years total (one year each from any of the following areas are accepted: biology, chemistry, earth science, integrated sciences and physics).

Provide evidence of English language proficiency (TOEFL 61)

Accommodation

Provided by partner agencies

Speciality

STEM-OPT for international students on F-1 visas

This program may be eligible for an Optional Practical Training extension for up to 24 months. This OPT work authorization period may help international students gain skills and experience in the U.S. Those interested in an OPT extension should review ASU degrees that qualify for the STEM-OPT extension at ASU's International Students and Scholars Center website.

The OPT extension only applies to students on an F-1 visa and does not apply to students completing a degree through ASU Online.

Available online

Additional information

Program description

In the BS program in biological sciences with a concentration in conservation biology and ecology, students will discover how to conserve biological diversity and restore degraded ecosystems and will examine the way organisms interact with each other and their physical environment.

Arizona State University is committed to a more sustainable world and sharing knowledge of conservation biology and ecology. Students gain hands-on experience with world-renowned conservation biologists to investigate the impact of humans on Earth's biodiversity, prevent the extinction of species, promote the sustainable use of biological resources and reestablish desired conditions in a variety of ecosystems.

This program is available as an accelerated degree program.

Concurrent program options

Students pursuing concurrent degrees (also known as a “double major”) earn two distinct degrees and receive two diplomas. Working with their academic advisors, students can create their own concurrent degree combination. Some combinations are not possible due to high levels of overlap in curriculum.

Accelerated program options

This program allows students to obtain both a bachelor's and master's degree in as little as five years. It is offered as an accelerated bachelor's plus master's degree with:

- Biology (Biology and Society), MS
- Biology, MS
- Computational Life Sciences, MS
- Global Management, MGM
- Microbiology, MS
- Molecular and Cellular Biology, MS

Acceptance to the graduate program requires a separate application. Students typically receive approval to pursue the accelerated master's during the junior year of their bachelor's degree program.

Global opportunities

Global experience

Through study abroad programs, students studying biological sciences are able to experience distinct biological environments and gain an understanding of conservation biology practices worldwide. They are exposed to a variety of laws, policies and practices in biology-centric environments and expand their knowledge of how science impacts society. Students also are able to engage in community service and outreach, which can help them stand out in graduate study or a professional career.

Career opportunities

The conservation biology and ecology concentration within the biological sciences major provides students with an individualized and skill-based foundation that will enable them to pursue advanced research and graduate study in biological sciences, environmental law and economics, physiology, ecology and conservation.

The Bachelor of Science degree program also prepares students with training in specific skills they need for direct entry into their choice of career in a wide variety of fields and positions, including education, environmental resources, animal and plant physiology and identification, behavior ecology, population biology, conservation of endangered species and restoration of degraded ecosystems.
