Two installment - 1 375 EURO

Additional information

Further information

Software development is the English language study of programming. When we start working on a software project, we have to consider several elements. These include requirements analysis, modelling, implementation and debugging. It is important to remember that we can implement each of these elements in different ways. Today, programmers can use a range of specialised tools to help create and manage complex applications. Still, programmer is the most sought-after profession on the market. And programming is an international language.

During the course of study, you will gain

- knowledge and use of compilers and compilation techniques
- understanding of programming language syntax and programming language semantics
- programming at the operating system level
- firm grasp of distributed programming and cloud processing
- ability to develop complex business applications in network environments
- training and certification in the use of modern programming languages and environments

Jobs for you

- Java Software Engineer
- C++ Programmer/Designer/Developer
- .NET Programmer
- PHP Programmer
- Mobile Application Programmer
- Software Engineer
