

Arizona State University (Tempe campus)

Psychology, BS

Study details

Course type: Bachelor's degree

Degree: Psychology, BS LAPGSBS

Study mode: Full time

Duration: 48 Month

Cost of study

Cost : 35 430 USD

Reg. fee : 85 USD

Scholarship :

Insurance : 2 765 USD

Intake/s

Jan/May/Aug

Requirements

Academic requirements

First-year students must:

- Have a 3.00 grade point average (GPA) (a "B" or better where "A"=4.00) from a secondary school. Some ASU programs may have higher admission or English proficiency requirements and may consider a minimum ACT or SAT score.
- Must have three years of high school coursework. (If you are currently in high school, ASU needs to see 9–11 grade coursework. If you have completed high school, ASU needs to see 10–12 grade coursework.)
- Must have and present a completed high school diploma or certificate.

Conditional admission

ASU may offer conditional undergraduate admission to international applicants to an on-campus program who meet the academic (aptitude) requirements but who are not proficient in English. This offer of conditional admission will give you time to improve your English proficiency before you start classes at ASU. Your conditional admission offer is good for up to three semesters, during which time you must meet one of these requirements to begin your ASU experience.

Competency requirements

International students who completed high school outside the U.S. are required to meet the following competency requirements:

- Math: four years (algebra I, geometry, algebra II and one course requiring algebra II as a prerequisite).

- Laboratory science: three years total (one year each from any of the following areas are accepted: biology, chemistry, earth science, integrated sciences and physics).

Provide evidence of English language proficiency (TOEFL 61)

Accommodation

Provided by partner agencies

Additional information

Program description

The BS in psychology emphasizes the scientific study of human behavior, cognition and more. The program combines innovative learning methods with classroom and laboratory experiences for an education that encourages interdisciplinary opportunities.

Students gain a strong foundation in psychological theory and practice, honing research analysis and critical thinking skills. They engage with esteemed faculty, exploring human and animal behavior, and they learn to effectively interact with diverse groups across scientific interests and disciplines.

This program connects students to a robust support network, internships and engaged alumni. Graduates possess foundational psychology knowledge that enhances their work, relationships and family roles.

Concurrent program options

Students pursuing concurrent degrees (also known as a “double major”) earn two distinct degrees and receive two diplomas. Working with their academic advisors, students can create their own concurrent degree combination. Some combinations are not possible due to high levels of overlap in curriculum.

Accelerated program options

This program allows students to obtain both a bachelor's and master's degree in as little as five years. It is offered as an accelerated bachelor's plus master's degree with:

- Global Management, MGM

Acceptance to the graduate program requires a separate application. Students typically receive approval to pursue the accelerated master's during the junior year of their bachelor's degree program.

Global opportunities

Global experience

Through study abroad programs, students are exposed to unique differences in human behavior and the human condition, are able to improve language and cross-cultural skills for effective communication, and are challenged to adapt to new social and cultural circumstances.

The expanded education that students acquire through a Global Education program will be a valuable enhancement to their resume, helping them stand out when applying for graduate school or when pursuing their choice of careers.

Career opportunities

With a Bachelor of Science in psychology, students gain diverse career options. This program establishes a strong foundation for immediate entry into science-based career fields, such as health care or research and development in an academic or business environment.

It also positions students for a pathway into medical school. Graduates are well-prepared for rewarding careers in pre-med and health fields as well as research and graduate study in psychology, health sciences, law and other graduate-level degree programs.
