Tuition fees for International students will increase by no more than 5% per year for the length of your course.

Additional information

Degree Overview

Spatial planners create and manage sustainable cities and the countryside and help solve urban problems.

This course focuses specifically on developing and enhancing your knowledge and critical understanding of the principles and practice of urban design to achieve sustainable cities and regions. You'll be able to suggest intervention strategies to improve regeneration of declining places and cities.

You will also develop your understanding of spatial analysis, statutory planning, property development processes, and sustainability in contemporary cities and sustainable urban design.

Covid-19 is reframing the shape of our places. Planning can support that change and help us achieve a sustainable future. Planning expertise will be crucial in managing change in our built and natural environments and for the wellbeing of people.

Post Covid-19, and with growing attention on the climate emergency, our built environment is unlikely to return to its previous form. The role of planning is vital in the creation of 15-minute cities and other strategies for change at both a local and strategic level.
