Speciality

The tuition fees are usually paid by the practice partner

Additional information

Your studies at a glance

Artificial Intelligence (AI) is continuing to rapidly evolve and is becoming an integral part of the business economies these days. It is the most important digital technology for global business transformation and perhaps one with the most significant overall business impact. The goal of our dual degree in Software Engineering is to educate specialists in software engineering and AI who are able to develop solutions and computer programmes for high quality smart systems that are important in all types of industries.

In this course students not only get to know the current challenges and solutions in the field of software design, but they also learn to develop software that is based on professional, clean and stable code and learn about the new trends in mobile application development. After successfully completing this degree graduates will be able to design, create and implement intelligent software.

Become a Software Engineer

In our Software Engineering dual programme students not only get to know the current challenges and solutions in the field of software design and architecture, but they also learn to develop software that is based on professional, clean and stable code, and master new trends in mobile application development.

After successfully completing this course graduates will be able to design, create and implement intelligent software.

Career Perspectives

This dual study programme prepares you for your professional career in the software industry. Your tasks may vary depending on the industry, company and specialisation. Above all, however, you will develop high-quality software solutions that fulfil the needs of users.
