Speciality

IY0 (Law, Media, Psychology, and Social Sciences)

Additional information

Degree Overview

On this course, as well as studying general psychology modules, students will specialise in understanding the psychological factors involved in mental and physical health. In clinical psychology, students will study behavioural problems in children, mental illness in adults, and psychological problems in old age. This will include important contemporary issues such as eating disorders and drug misuse. students will analyse, not only what causes these problems but also how they can be treated, or, even better, prevented. In health psychology, students will examine the psychological factors that lead some individuals to behave in health-damaging ways, such as eating unhealthy diets, not taking enough exercise, or engaging in unsafe sexual behaviour. Further, students will study what happens when individuals do become ill or disabled, with diseases such as heart disease, cancer, and HIV/AIDS. As well as understanding how things can go wrong, you will analyse how the situation can be improved through psychological interventions.

Study Reasons

- British Psychological Society fully accredited degree programmes.
- Bangor Psychology is a large and cosmopolitan department with staff and students from all over the world
