In the B.Sc. Web Development programme, you learn to conceptualise, design and develop real, digital products and services. Interaction design, UX design, usability engineering, scripting languages, business informatics and social media are just as much part of the curriculum as hardware programming, communication strategy and agile project management. Based on these modules, you develop digital experiences, online platforms, hardware projects, virtual spaces and games.

The focus is exclusively on sustainable projects that have a sustainable impact across society with large companies, NGOs, institutes, universities or start-ups.

You learn how to coordinate real projects, work in teams with content experts, communication designers and marketing experts, advise clients, derive concepts from ideas and finally design and technically implement them. Our students already work on assignments for clients from all over the world during their studies - an ideal preparation for a professional career start.

You already have previous experience, e.g. as a trained media designer, thanks to previous university studies or you work as a freelance web developer or designer? Or are you already enrolled in the full-time B.Sc. Development programme at the Berlin School of Design and Communication? Then you have the opportunity to switch to the dual programme. In the specific dual modules you acquire in-depth knowledge and credits for your work in your partner company (approx. 2.5 days per week, 5 ECTS per semester).

You can find career opportunities in media agencies or medium-sized and international companies as a software developer, consultant, game designer or app developer. You are also well equipped to start your own company or work as a freelancer.

After finishing your studies, you have what it takes to become a:

- UI/UX Design Expert
- Full Stack Developer
- Frontend Designer
- Service Design Thinking Expert
- Web Developer
- IOT Hardware-Based Coding Expert
- Software Engineer
- Content Manager
- Project Manager Digital
- Game Developer / Game Designer
- Social Media Engineer
- E-Learning Expert
