Additional information

Degree Overview

Explore the relationship between energy, environment, and climate change and how they relate to sustainability throughout all sectors in society.

This course gives you insights and skills in key areas of transition, such as energy, mining, agriculture, waste management, and the reduction of plastics in the circular economy. You will study the law, policy, and economics of energy transition across the energy cycle.

You'll learn about:

- The promotion of renewable energy forms and the ways to reduce carbon emissions from conventional and unconventional fossil fuels
- The social dimension of the transition to cleaner energy, which must deliver access for all, be socially just, and fair for all countries environmentally and socially sustainable mining in producer countries
- You will develop your ability to analyse, evaluate, and critically review theory and policy debates relating to sustainability.
- You will be able to draw on international perspectives and examples of best practice in relation to methods of evaluation and assessment of sustainability.
